# Designing for Sustainability when Architecture Standards are involved: an industrial Case Study

 $blinded\ for\ review$ 

### Appendix A. Sustainability Impacts of Data Platform A

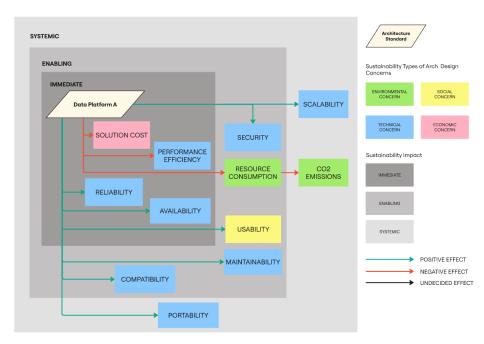

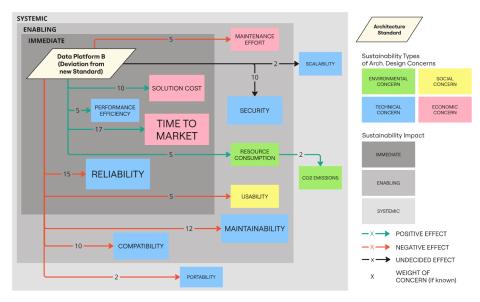

Fig. 1. Decision map for DP-A

#### $2 \hspace{1cm} blinded$

## Appendix B. Sustainability Impacts of Data Platform B

 $\bf Fig.~2.$  Decision map for DP-B

### Appendix C. Sustainability Concerns

Concerns which are not adopted from the ISO/IEC 25010:2012 standard have been presented with a gray background color.

Table 1: Identified sustainability concerns.

Sustainability	Sub-concern	Definition	Weight	Sustainability
Concern				Dimension
Time to Market	-	The duration between the conception of a product or service and its availability to in- tended users/customers		Economic
Reliability	Availability	The degree to which a system, product or com- ponent is operational and accessible when re- quired for use		Technical
	Recoverability	The degree to which, in the event of an interrup- tion or a failure, a prod- uct or system can re- cover the data directly affected and re-establish the desired state of the system		
Maintainability		The degree to which a system or computer program is composed of discrete components such that a change to one component has min- imal impact on other components		Technical
	Modifiability	The degree to which a product or system can be effectively and effi- ciently modified with- out introducing defects or degrading existing product quality		

#### $4 \qquad \qquad blinded$

Compatibility	Interoperability	The degree to which two or more systems, products or components can exchange informa- tion and use the infor- mation that has been exchanged		Technical
Security	Integrity	The degree to which a system, product or com- ponent prevents unau- thorized access to, or modification of, com- puter programs or data	10	Technical
Solution Cost	-	The expenditure associated with implementing and running a software solution		Economic
Performance Efficiency	Time Behaviour	The degree to which the response and processing times and throughput rates of a product or system, when perform- ing its functions, meet requirements		Technical
Resource Consumption	-	The amount of different resources used by a sys- tem over a specified pe- riod	5	Technical
Usability	Learnability  Operability	The degree to which a product or system can be used by specified users to achieve specified goals of learning to use the product or system with effectiveness, efficiency, freedom from risk and satisfaction in a specified context of use The degree to which a product or system has attributes that make it easy to operate and control		Social

Maintenance	_	The effort or cost re-	5	Economic
Effort		quired for the correc-		
		tion or modification of		
		a software product af-		
		ter delivery, to correct		
		faults, to improve per-		
		formance or other at-		
		tributes, or to adapt the		
		product to a changed		
		environment		
Portability	Adaptability	The degree to which	2	Technical
		a product or system		
		can effectively and		
		efficiently be adapted		
		for different or evolving		
		hardware, software or		
		other operational or		
		usage environments		
Scalability	-	The capacity of a soft-	2	Technical
		ware solution to grow		
		or shrink in response to		
		changing demands		
$CO_2$ Emissions	-	$CO_2$ from burning oil,		Environmental
		coal, natural gas and		
		waste materials for en-		
		ergy use		
			Total = 100	

### Appendix D. Key Performance Indicators

Color coding indicates which fields were existing and reused (gray), or missing and added (white).

Sustainability Concern: Time to Market							
Goal	CSF	KPI		Metric	Measure		
Gain com-	Launch	Time Deviati	on (%)	Time Deviation	Lead		
petitive	product	0	Action	= ( —Lead time	time,		
market	within	A: $\leq 5\%$	Streamline	- Target time—	Target		
advantage		B: 6 to 10%		/ Target time) ×	time		
	time	C: 11 to 20%	ment and	100			
		D: 21 to 50%	production				
		E: $\geq 50\%$	processes				

Table 2. KPI for Time to Market

Sustainability Concern: Reliability							
Goal	CSF	KPI		Metric	Measure		
Offer	Pass	Reliability		Severity	Severity		
reliable	quality	Target	Action	level of	level of		
service	check	A: 0 Bugs	Resolve	the	bugs,		
to users		B: at least 1 Minor Bug	open bugs,	worst	Number		
		C: at least 1 Major Bug	prioritizing	open	of bugs		
		D: at least 1 Critical Bug	the most	bug			
		E: at least 1 Blocker Bug	severe ones
